

Create response (list) as a variable that gets the list of responses the 8 ball can give
Create an integer variable (numResponse) that holds the indices of the responses in the list
Print user options
Create choice variable that holds the input to the question "Please choose 1, 2, or 3:"
If the user chooses 1 (print the list): enumerate the response list and print it
If the user chooses 2 (choose a specific answer): create a variable called chosenResponse that gets the input of the prompt "which answer would you like to print? Please choose a number 0 through 7"
Print the correlated response
If anything else is put, print "I'm not familiar with that response..."
Create a string variable (eightBallAnswer) that gets the input of "What would you like to ask the Magic 8 Ball? "
Create an integer variable that holds the number of indices in the response list
Create an integer variable that chooses a random integer from the previously-made integer variable
Print the random integer's correlated response
If anything else is put when the user is deciding between options 1, 2, and 3, print "i'm not sure what you want me to do"
